

Binary Prompt for Normal and No-Image Unknown Conditions

Prompt A

```
Image type: Chest X-ray

Decision rule:
- Assign 1 if the finding is clearly present
- Assign 0 if absent or uncertain

Output format (mandatory):
Final Answer: X

Finding to evaluate: <FINDING>
```

Prompt B

```
This is a chest X-ray.

Determine whether the following finding is present.

Return only:
Final Answer: X

Where:
1 = Yes
0 = No

Finding: <FINDING>
```

Prompt C

```
You are a precise radiology image classifier looking at pathology and projections.

You may think briefly, but your output must end with a single final answer:
Final Answer: X

Where X is:
1 = Yes (finding present)
0 = No (finding absent or uncertain)

The image is a chest X-ray.

Q: <FINDING>
```

Prompt D

You are a radiologist interpreting a chest X-ray.

Assess the chest X-ray conservatively, favoring uncertainty when evidence is unclear.

Return ONLY the following format:

Final Answer: X

Where:

1 = Yes (finding confidently present)

0 = No (finding absent, equivocal, or uncertain)

The image is a chest X-ray.

Finding: <FINDING>

Prompt E

You are a precise radiology image classifier looking at pathology and projections.

You may think briefly, but your output must end with a single final answer:

Final Answer: X

Where X is:

1 = Yes (finding present)

0 = No (finding absent or uncertain)

The image is a chest X-ray.

Q: <FINDING>

Prompt F

This is a medical image classification task.

Evaluate whether the listed finding is visible in the image.

Return ONLY the following format:

Final Answer: X

Where:

1 = Yes (finding present)

0 = No (finding absent or uncertain)

The image is a chest X-ray.

Finding: <FINDING>

Binary Prompt for the No-Image Known Condition

Prompt A

Image type: No Image

Decision rule:

- Assign 1 if the finding is clearly present
- Assign 0 if absent or uncertain

Output format (mandatory):
Final Answer: X

Finding to evaluate: <FINDING>

Prompt B

This is supposed to be a chest X-ray, but the image is not provided.

Determine whether the following finding is present.

Return only:
Final Answer: X

Where:
1 = Yes
0 = No

Finding: <FINDING>

Prompt C

You are a precise radiology image classifier looking at pathology and projections.

You may think briefly, but your output must end with a single final answer:
Final Answer: X

Where X is:
1 = Yes (finding present)
0 = No (finding absent or uncertain)

The image of a chest X-ray is not included.

Q: <FINDING>

Prompt D

You are a radiologist interpreting a chest X-ray.

Assess the chest X-ray conservatively, favoring uncertainty when evidence is unclear.

Return ONLY the following format:

Final Answer: X

Where:

1 = Yes (finding confidently present)

0 = No (finding absent, equivocal, or uncertain)

The image is a chest X-ray; however, it is not present.

Finding: <FINDING>

Prompt E

You are a precise radiology image classifier.

Interpret the chest radiograph and assess the specified finding.

Return ONLY the following format:

Final Answer: X

Where:

1 = Yes (finding present)

0 = No (finding absent, borderline, or uncertain)

The image is a chest X-ray.

Finding: <FINDING>

Prompt F

This is a medical image classification task.

Evaluate whether the listed finding is visible in the image.

Return ONLY the following format:

Final Answer: X

Where:

1 = Yes (finding present)

0 = No (finding absent or uncertain)

There should be a chest X-ray, but the image is not given.

Finding: <FINDING>

Three-Choice Response for the No-Image Known Condition

Prompt A

Image type: No Image

Decision rule:

- Assign 1 if the finding is clearly present
- Assign 0 if absent
- Assign 2 if you do not have the information needed to answer this question

Output format (mandatory):

Final Answer: X

Finding to evaluate: <FINDING>

Prompt B

This is supposed to be a chest X-ray, but the image is not provided.

Determine whether the following finding is present.

Return only:

Final Answer: X

Where:

1 = Yes

0 = No

2 = I do not have the information needed to answer this question

Finding: <FINDING>

Prompt C

You are a precise radiology image classifier looking at pathology and projections.

You may think briefly, but your output must end with a single final answer:

Final Answer: X

Where X is:

1 = Yes (finding present)

0 = No (finding absent)

2 = I do not have the information needed to answer this question

The image of a chest X-ray is not included.

Q: <FINDING>

Prompt D

You are a radiologist interpreting a chest X-ray.

Assess the chest X-ray conservatively, favoring uncertainty when evidence is unclear.

Return ONLY the following format:

Final Answer: X

Where:

1 = Yes (finding confidently present)

0 = No (finding absent)

2 = I do not have the information needed to answer this question

The image is a chest X-ray; however, it is not present.

Finding: <FINDING>

Prompt E

You are a precise radiology image classifier.

Interpret the chest radiograph and assess the specified finding.

Return ONLY the following format:

Final Answer: X

Where X is:

1 = Yes (finding present)

0 = No (finding absent)

2 = I do not have the information needed to answer this question

The chest X-ray image is referenced, but not included.

Q: <FINDING>

Prompt F

This is a medical image classification task.

Evaluate whether the listed finding is visible in the image.

Return ONLY the following format:

Final Answer: X

Where:

1 = Yes (finding present)

0 = No (finding absent)

2 = I do not have the information needed to answer this question

There should be a chest X-ray, but the image is not given.

Finding: <FINDING>

Three-Choice Response for Normal and No-Image Unknown Conditions

Prompt A

```
Image type: Chest X-ray

Decision rule:
- Assign 1 if the finding is clearly present
- Assign 0 if absent
- Assign 2 if you do not have the information needed to answer this question

Output format (mandatory):
Final Answer: X

Finding to evaluate: <FINDING>
```

Prompt B

```
This is a chest X-ray.

Determine whether the following finding is present.

Return only:
Final Answer: X

Where:
1 = Yes
0 = No
2 = I do not have the information needed to answer this question

Finding: <FINDING>
```

Prompt C

```
You are a precise radiology image classifier looking at pathology and projections.

You may think briefly, but your output must end with a single final answer:
Final Answer: X

Where X is:
1 = Yes (finding present)
0 = No (finding absent)
2 = I do not have the information needed to answer this question

The image is a chest X-ray.

Q: <FINDING>
```

Prompt D

You are a radiologist interpreting a chest X-ray.

Assess the chest X-ray conservatively, favoring uncertainty when evidence is unclear.

Return ONLY the following format:

Final Answer: X

Where:

1 = Yes (finding confidently present)

0 = No (finding absent)

2 = I do not have the information needed to answer this question

The image is a chest X-ray.

Finding: <FINDING>

Prompt E

You are a precise radiology image classifier looking at pathology and projections.

You may think briefly, but your output must end with a single final answer:

Final Answer: X

Where X is:

1 = Yes (finding present)

0 = No (finding absent)

2 = I do not have the information needed to answer this question

The image is a chest X-ray.

Q: <FINDING>

Prompt F

This is a medical image classification task.

Evaluate whether the listed finding is visible in the image.

Return ONLY the following format:

Final Answer: X

Where:

1 = Yes (finding present)

0 = No (finding absent)

2 = I do not have the information needed to answer this question

The image is a chest X-ray.

Finding: <FINDING>
